

Sports Clubs vs Attainment

Sports Clubs vs Attainment

These two graphs show the correlation between the number of sports clubs attended and the level the children have attained by the end of Year 6. The only children involved are the current Year 6 children. The first graph only includes those that attended an after school sports club, this is 74% of the Year 6 children. The second graph is all of the Year 6 children, both show a positive correlation of sports clubs and attainment level with graph 2 (children who didn't go to a club) showing a stronger correlation.
